

Future Clinical Workspace Designs

A complete architectural proposal and stakeholder presentation for Phase 2 and Phase 3 expansion of the Harmony Patient Record Workspace.

PHASE 1: BASELINE VISUAL UX (IMPLEMENTED)

Current Active Upgrades

The patient workspace tabs have been upgraded with beautiful, micro-animated visual modules that are live in production. These additions require no server changes and run with high-performance client rendering:

Overview: Critical Allergy Alert

A glassmorphic, glowing warning card at the top of the Overview panel, rendering active clinical allergies and contraindications safely.

- ✓ Type-safe React boundary integrations
- ✓ Double-pulse warning highlight framework
- ✓ Instant visibility on clinical file loading

Vitals: Custom SVG Trend Charts

Dual responsive chart tracking Systolic/Diastolic BP (rose-sky gradients) and Weight (emerald line) over the last 10 visits.

- ✓ Zero external NPM package overhead
- ✓ Fully responsive with high-DPI hover guides
- ✓ Immune to Next.js SSR hydration drift

Remedies: Patient Guidelines Printing

One-click Treatment Leaflets printing. Automatically formats remedies, dietary instructions, and guidelines beautifully on a physical page.

- ✓ Custom CSS @media print layout profiles
- ✓ Clean high-contrast typography
- ✓ Isolates the leaflet text, hiding administrative UI

Notes: Clinical Handovers Bento Grid

Structured clinical handovers arranged into themed sticky-note grids: Administrative, Pharmacological, Genetic, and Chronological notes.

- ✓ Highly scannable CSS Grid bento layout
- ✓ Role-stamped colors (cream, sky, emerald, lavender)
- ✓ Checked-state click actions for archiving

PHASE 2: STRUCTURED CLINICAL TOOLING (PROPOSED FUTURE)

Clinical Decision Support Modules

Phase 2 shifts from static text inputs to active decision-support elements, enabling standardized diagnostic tracking and system-by-system physical reviews.

Assessments Tab: System-by-System Exam Templates

Transitions raw physical examination fields into physiological system accordions (HEENT, Cardiovascular, Respiratory, GI, Neuro, Skin).

- **Smart-Insert Chips:** One-click clinical templates that automatically populate standard observations (e.g. clicking "Normal GI" inserts: *"Abdomen soft, non-tender, non-distended, active bowel sounds."*).
- **Comparative Slider Panels:** Lock historical exam reports side-by-side to review physical improvement.

Diagnosis Tab: ICD-11 Workbench & DDx Workspace

Integrates diagnostic coding and active case synthesis directly into the practitioner's workspace.

- **ICD-11 Directory Search:** Auto-completing query search to tag WHO clinical codes (e.g. *"Essential Hypertension" - BA41*) onto diagnoses.
- **Differential Diagnosis (DDx) Whiteboard:** Drafting canvas to list suspect, working, and ruled-out conditions before promotion to primary.

PHASE 3: INTAKE AUTOMATION & SENSORY MAPPING (PROPOSED FUTURE)

Structured Cabinets & Anatomical Body Mapping

Phase 3 completes the workspace with secure intake document storage, qualitative scoring trends, and highly advanced spatial injury tracking.

Follow-ups: Subjective Scores & SMS Recalls

Charts qualitative patient progress alongside objective vital data, with recall outreach automation.

- **Subjective Score Trends:** Tracks patient-rated metrics (Sleep, Energy, Mood, Appetite) on 1-10 timelines.
- **Auto-Recall SMS:** Compiles the next scheduled date, doctor, and symptom into pre-formatted clinic SMS/WhatsApp templates.

Documents: Organized Lab Cabinets & Signature Pads

A full digital filing cabinet organizing files into structured drawers.

- **Category Sub-drawers:** Direct organization into Consent, Lab Reports, Radiology, and Medical Certificates.
- **Witness signature module:** On-screen digital verification captures signatures for legal, high-risk, or parental agreements.

Interactive Visual Body Mapping (High-Fidelity Concept)

This proposed module replaces textual symptom location notes with an interactive SVG anatomical coordinate map in the Assessments workspace. Doctors double-click body regions to pinpoint pain, skin lesions, or tension, mapping those exact points on chronological progress graphs.

📍 LIVE CONCEPTUAL SANDBOX (INTERACTIVE MOCKUP)

Anatomical Model Map (Click red spots to test)

Symptom Hotspot Details

Click on any pulsing red node on the anatomical map to view registered symptoms, historical severity metrics, and remedy tracking.

COORDINATE NODE

Node #01: Cranial / Frontal

Logged Complaint: Frontal sinus pressure & chronic headache. Catarrh is thick and yellow.

Timeline Severity: 7 / 10

Assigned Remedy: Pulsatilla 30C

COORDINATE NODE

Node #02: Left Acromioclavicular

Logged Complaint: Dull, radiating muscular strain from desk-work fatigue. Aggravated by cold air.

Timeline Severity: 5 / 10

Assigned Remedy: Rhus Tox 200CH

COORDINATE NODE

Node #03: Lumbar L4-L5 Region

Logged Complaint: Acute localized spasm upon rising from a seated position. Better with continuous walking.

Timeline Severity: 8 / 10

Assigned Remedy: Nux Vomica 200C

COORDINATE NODE

Node #04: Right Patella Tendon

Logged Complaint: Crepitus and localized mild inflammation after physical activity. Better with firm bandages.

Timeline Severity: 4 / 10

Assigned Remedy: Bryonia Alba 30C

Total Pinned: 4 spots

Active Filters: All
